

UHID	457037	Patient Name	Mrs Asha Sinha
Age	62 Y,6 M,11 D	Gender	Female
Acknowledge Date	26-08-2026 02:14 PM	Report Status	Final
Accession Number	HHF1RAN-8107	DOB	15/02/1964
Service Name	USG WHOLE ABDOMEN	Order Date	26-08-2026

USG WHOLE ABDOMEN

Radiology

LIVER: Liver is normal in size *and shows diffusely raised echogenicity suggestive of fatty infiltration*. No focal intra-hepatic lesion is detected. Intra-hepatic biliary radicals are not dilated. Portal vein is normal in calibre.

GALL BLADDER: Gall bladder appears echo free with normal wall thickness. Common bile duct is normal in calibre.

PANCREAS: Pancreas is normal in size and echo pattern. MPD is not dilated.

SPLEEN: Spleen is normal in size shape & position. Echoes are normal.

RIGHT KIDNEY: Measures 8.2cm appears normal in size, shape, position, outline & echogenicity, CMD is well preserved. No evidence of calculus/mass lesion or hydronephrosis seen.

LEFT KIDNEY: Measures 8.6cm appears normal in size, shape, position, outline & echogenicity, CMD is well preserved. No evidence of calculus/mass lesion or hydronephrosis seen.

Visualized parts of retroperitoneum do not reveal any lymphadenopathy.

URINARY BLADDER: The urinary bladder is well distended with clear contents. There is no evidence of any intraluminal or peri vesical abnormality.

Uterus: *Uterus is not visualised. (post hysterectomy).*

Bilateral adnexa appears clear.

No free fluid seen in pouch of Douglas.

IMPRESSION:

- **HEPATOSTEATOSIS GRADE I.**

Please correlate clinically.

Remarks :

This is a professional opinion based on imaging findings and not the final diagnosis. It should be correlated clinically and with other relevant investigations to arrive at a proper conclusion. Not valid for medico-legal purpose.
